Azerbaijan Medical University,Baku  
 Medical plant-glycyrrhiza is national richness of Azerbaijan.Itis viable material of medical,tabaco,nutrition,building industry.Azerbaijan is main contry being abbe to obtaine Glycyrrhiza more thon 15000 tonn of Glycyrriza radix per year made usage in omn aims.We have made a map of this plant widepread in Azerbaijan,it have shown rish areas and also posibbe industrial objects,where we can obtain products of Glycyrrhiza.

We want to prezent infokvation fhat azerbaijan medicals have been made more 20 preparations of Glycyrrhiza glabra,and have studied and lymfotropic actions of this preparations use in different illnss of lymphatic system.WF leared limphatropic action,which is charactezized by inflence to bood and lymph coagulation and also to speed of lymphotoc and making of lymph.

It is obtaned the new results that Glycyrrhiza decreased coagulation potential of lymphootoc and making of lymph.This preparation may be used of varios maring of tromb and treatment of endotoxicosis. Itis map may be usefull for medics,pharmacologysts,biologists and vher scientists who doze some works fos developing of pharmacology industry and set up new preparations.It is most interesting for one who has comercial activity in different filld where is useful products of Glycyrrhiza.
