

International Cartographic Association
Association Cartographique Internationale

(New) Commission on Topographic Mapping

Topographic mapping underpins most cartographic products, whether produced by the state, private companies, or the crowd

Key Aims of the New Commission:

To facilitate research on how producers of topographic maps can better serve their customers and users in an environment of changing methods of production and dissemination

To establish best practice in assessing national needs for topographic mapping and their impact on design (and vice versa)

International Cartographic Association
Association Cartographique Internationale

We will achieve these through **holding workshops** and **publishing our research** via ICA journals, often in collaboration with other Commissions (e.g. Map Production, Map Design, Mountain Cartography, Education and Training, and Use and Usability)

Chair: **Dr Alexander Kent (UK)** Vice Chair: **Dr Ciołkosz-Styk (Poland)**
